

 AWS HANDS-ON SERIES

My First Terraform Resource on AWS

Project 3.1 — Hello Terraform · Phase 1

 Viswanath TGR

 ap-south-1 Mumbai

 Terraform v1.7.5

 AWS S3

 Swipe to see the full journey

 linkedin.com/in/viswanath-tgr-328b11264

WHAT IS TERRAFORM?

Infrastructure as Code

PROVIDER

Plugin that talks to AWS API

RESOURCE

AWS resource to create (S3, EC2...)

STATE FILE

Terraform's memory of what it created

PLAN

Safe preview — never touches AWS

APPLY

Actually creates resources in AWS

DESTROY

Removes all managed resources

ENVIRONMENT SETUP

Before We **Start**

**AWS IAM User Configured**

`aws sts get-caller-identity → vswnth1` ✓

**Terraform Installed**

`terraform --version → v1.7.5` ✓

**Region Set to Mumbai**

`aws configure set region ap-south-1` ✓

**main.tf Written**

`S3 bucket + versioning + random suffix` ✓

The 5 Commands I Ran

<code>terraform init</code>	Downloads AWS provider plugin locally	✗ No AWS
<code>terraform plan</code>	Previews 3 resources — safe dry run	✗ No AWS
<code>terraform apply</code>	Creates S3 bucket in Mumbai in 5 seconds	✓ AWS
<code>terraform state list</code>	Shows 3 tracked resources in state	✗ No AWS
<code>terraform destroy</code>	Deletes all resources — cost = \$0	✓ AWS

What Was Created

Live in AWS ap-south-1 (Mumbai) · Account: 495331821583

Random ID

hex = "9273bec5"

⚡ 0 seconds

S3 Bucket

hello-terraform-9273bec5

⚡ 3 seconds

S3 Versioning

status = "Enabled"

⚡ 2 seconds

✅ Apply complete! Resources: 3 added, 0 changed, 0 destroyed.

TAKEAWAYS

Key Learnings

💡 **terraform init** only downloads plugins — never touches AWS

💡 **terraform plan** is always safe — always run before apply

💡 Only **apply** and **destroy** make real changes in AWS

💡 AWS **auto-added AES256 encryption** — default security since 2023

💡 State file = Terraform's **memory** — never edit it manually

💡 Terraform runs **locally** and talks to AWS via API calls

Day 1 of 62 Projects Done!

Building a production-oriented AWS roadmap
Cloud Engineering · DevOps · Data Engineering

📌 Next: **Project 3.1 Phase 2 — Terraform Variables**
Making infrastructure reusable across dev / qa / prod
